

HSS Analyzer

The HSS Analyzer™: provides timely information for enhancing clinical operations, improving quality outcomes, ensuring accurate revenue and managing risk. Using industry-standard ODBC links and other methods, this product interfaces with virtually any database. HSS Analyzer™ combines clinical and financial data from your billing system or integrates it with your data from our Advantage system allowing you to proactively review essential performance issues. Use the power of data driven healthcare information to deliver the highest quality care to your patients, while achieving optimum performance.

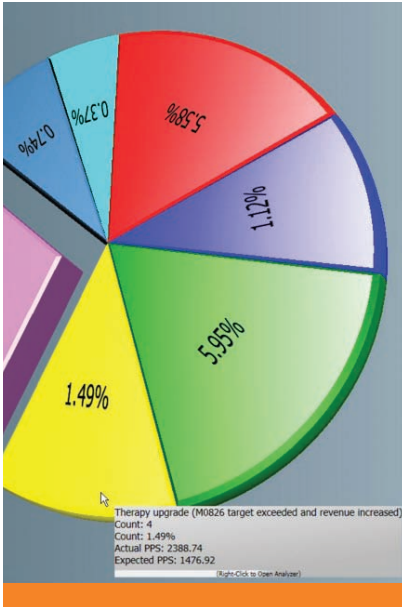

Some of the strengths of The Analyzer include:

- User defined key-performance-indicators
- Easy-to-use search tool
- OASIS assessment accuracy audits
- Detailed utilization, outcome and financial information
- Performance benchmarking against a large customer database
- Flexible forecast tool for more effective episode management

HSS Analyzer optional modules continued on back

HSS Analyzer includes optional modules:

Key Performance Indicator Dashboard

Advanced information dashboard providing immediate access to your key-performance-indicators. Analyze clinical, quality, financial and operational results. Drill down immediately into assessments and episode details. Set threshold targets to alert you to critical variances. Filter information views by important data elements such as Agency, Branch, Team, Referral Source, or Diagnosis.

Assessment Auditor

Identify and correct OASIS errors. Audit rules are applied to your assessments, ensuring your data is accurate before it is locked and sent. You control the audits: turn them on or off; e-mail them to any staff only when necessary; modify existing rules or create your own. Statistical results allow you to investigate and verify audit rule validity.

Outcomes Module

Monitors progress in patient outcomes. From SOC through discharge, this module calculates outcome scores for any OASIS item. Use it to analyze visit utilization and clinician impact on outcomes. This module allows you to identify improvement opportunities and false outcomes due to OASIS error. Additionally, you can study results by agency, date, office, team, case manager, patient, ICD-9, and HHRG.

Web-Based Benchmarking Module

Stop waiting for old data. Our web-based benchmarking reports provide timely results that are comparable and relevant. Analyze data that is only one week old. Start getting the answers you need, when you need them!

Multi-Payer Module!

This module expands HSS Analyzer functions to non-Medicare OASIS and episode data available in your billing system. HSS Analyzer creates 60 day episodes with HHRGs and PPS revenue for Medicare Managed Care and Medicaid patients.

- Provides agency utilization experience and benchmark utilization experience for each patient to assist in negotiating with the payers.
- Tracks actual against authorized visits (includes an "Alert report")
- Entering and tracking "authorized" Medicare for any patient in order to track visit activity against care-plan "targets".
- Provides admission-based reporting .
- Alert reports for: A) when patient is nearing authorization target.
B) Different report when authorization time-period is coming to end
